WHAT ARE DERMAL FILLERS?

Injecting dermal fillers replaces the volume lost with age by plumping it up and making it firmer. This smoothes out fine lines and wrinkles, as well as rehydrating the skin from within.

IS IT SAFE?

Thanks to the manufacturing process, which benefits from the latest technological advances, the hyaluronic acid contained in Teosyal® gels is extremely pure. This guarantees exceptional tolerance and perfect integration into skin tissues.

CHEMICAL SKIN PEEL

WHY HAVE A CHEMICAL PEEL?

Chemical peels are used on skins which are sun damaged, wrinkled, blemished, acne scarred or blotchy. Skin will look tighter and more youthful than before but it is important to note that chemical peels cannot remove all facial flaws.

Mid Strength Peel (course of 3)	£650

PLEASE NOTE ALL PEEL PRICES INCLUDE A 2 WEEK PREPARATION HOMECARE KIT

SCLEROTHERAPY (Leg thread vein removal)

HOW DOES SCLEROTHERAPY WORK?

A very fine needle is used to inject a solution into the vein, which irritates the lining of the vessel causing it to swell and stick together. Over a course of treatments some veins will fade from view eventually becoming barely or not at all visible. A treatment session takes approximately 30-40 minutes. The number of treatment sessions depends on how many areas need to be treated but we generally recommend on average 4 treatments.

PRICING STRUCTURE

Small area	£200 per session
Medium sized area	£250 per session
Large sized area	£300 per session

Compression Stockings £29.99 (these are reused throughout the treatment course)

PLEASE NOTE THAT YOU WILL BE REQUIRED TO WEAR COMPRESSION STOCKINGS FOR A SHORT TIME DIRECTLY AFTER EACH TREATMENT. THESE CAN BE PURCHASED FROM COSMEDOCTOR OR FROM YOUR LOCAL CHEMIST.

LASER HAIR REMOVAL (Intense Pulsed Light)

HOW DOES LASER HAIR REMOVAL WORK?

The IPL (Intense Pulsed Light Therapy) hair removal procedure produces a high intensity flash of filtered light from the applicator head, which has been placed in contact with the skin. The energy from the light source is absorbed by the pigment melanin, which is the chromophore, which gives hair its colour. The hair rapidly absorbs this filtered light and transfers it to the surrounding cells that in turn are converted into heat raising them to a temperature of 70 degree Centigrade or more. The heating denatures the cells making them incapable of producing further hair growth.
